

Table 3. Total Ni concentrations and deployment times in solutions that contain Ni and NTA; average total metal concentrations during the deployment, $c_{T,M,Av}^*$; c_{DGT} calculated at the end of the deployment and the products $c_{DGT} \frac{D_M}{D_{ML}} \frac{1}{\xi}$. Parameters: $c_{T,NTA}^* = 8 \cdot 10^{-2} \text{ mol m}^{-3}$, $A = 3.14 \cdot 10^{-4} \text{ m}^2$, $D_{NiNTA} = 5.53 \cdot 10^{-10} \text{ m}^2 \text{ s}^{-1}$, $\frac{D_M}{D_{ML}} = 1.08$, $\delta^s = 1.13 \cdot 10^{-3} \text{ m}$, $c_{MOPS}^* = 1 \text{ mol m}^{-3}$, $pH = 7.50 \pm 0.01$, $T = 25.0 \pm 0.1 \text{ }^\circ\text{C}$ and salt background 100 mol m^{-3} .
